

PYRAMIDS™

Overview of the Game

Pyramids is a game for 2 to 5 players that sends you back in time to Ancient Egypt. Help your dynasty become resplendent and endure through the ages. Honor the great gods to obtain the most beautiful stones and construct the most dazzling necropolis.

Contents

105 Construction cards

5 God tiles (Horus, Anubis, Khepri, Sekhmet, Thoth)

5 Player Aid Cards

1 First Player token

1 scorebook

1 rulebook

Goal of the Game

Which Egyptian dynasty will be the most glorious? Pray to the gods to construct edifices in their honor and ensure your dynasty has a millennia-long posterity. Your necropolis, a place of eternal sleep, and glory, will be made up of Pyramids, Obelisks, and Tombs. Select the best combination of stones in the quarry, optimize their layout, and make your necropolis the most famous in all of Egypt!

The player with the most points at the end of the game wins.

Game Elements

CONSTRUCTION CARDS

Construction cards represent the materials with which you build the edifices of your necropolis. They have either 2 or 3 stones that come in five different colors: blue, white, red, green, or yellow.

Certain Construction cards have a Glyph that represents a Pyramid, Obelisk, or Tomb and will be worth victory points at the end of the game if you place them correctly.

PYRAMID

OBELISK

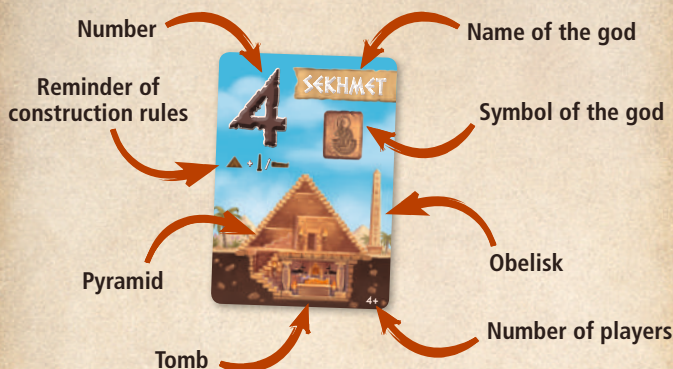

TOMB

GOD TILES

God tiles have these different elements:

These tiles represent the favors granted by the god you honor, showing you which edifice(s) you can build on your turn.

Example

God tile 1 allows you to place cards only in your Pyramid. However, God tile 2 allows you to place cards both in your Pyramid and your Tomb.

Note: There is a Pyramid on every God tile. An Obelisk is only on tiles 3, 4, and 5. A tomb is only on tiles 2, 4, and 5 (see **CLARIFICATIONS OF GOD TILES** page 8).

Setup

- 1 Choose the God tiles for the game according to the number of players:

2/3 players: take God tiles 1 to 4 and leave tile 5 (Thoth) in the box.

4/5 players: take all 5 God tiles.

- 2 Place the God tiles in the middle of the table, arranged in ascending order.

Note: In a two-player game, during the first turn, randomly set aside one of the God tiles so you only play with 3 of the 4 tiles. The removed tile will be added back to the game the following round.

- 3 Shuffle the Construction cards and deal one face-down to each player. You may look at your card.
- 4 Form a deck, face-down, with the remaining Construction cards.
- 5 The last player to have seen a pyramid is the first player and takes the First Player token as well as the deck of Construction cards.

Gameplay

A game plays over 10 rounds during which you build your necropolis. At the end of the 10th round, when everyone has constructed their Pyramid, the game ends and victory points are scored.

Note: To keep count of the number of rounds played, count the number of cards in your Pyramid.

GAMEPLAY OF A ROUND

Each round is made up of the following 5 phases:

1

Stock the Quarry

2

Select a God Tile

3.a

Select a Pair of Construction Cards

3.b

Construct your Necropolis

4

End of the Round

1 STOCK THE QUARRY

The player with the First Player token takes the deck of Construction cards and reveals Construction cards two-by-two to make as many pairs as there are players. The Construction cards must be visible to all players and the pairs must be separated from each other.

Pairs revealed this way are inseparable and can never be rearranged.

Example

For a four-player game, reveal 4 pairs of Construction cards, dealt randomly from the deck, during the Stock the Quarry phase. For a three-player game, you would reveal 3 pairs of Construction cards, and so on.

2 SELECT A GOD TILE

Starting with the first player and going clockwise, choose an available God tile and place it face-up in front of you.

God tiles are made up of:

- 🦅 a **number** indicating the turn order for Phase 3.a "SELECT A PAIR OF CONSTRUCTION CARDS",
- 🦅 the **edifices** the owning player can build during Phase 3.b "CONSTRUCT YOUR NECROPOLIS".

3.a SELECT A PAIR OF CONSTRUCTION CARDS

Starting with the player with the God tile closest to 1, players conduct Phases 3.a and 3.b in ascending order. First choose an available pair of Construction cards from the quarry and add it to your hand. Then go immediately to Phase 3.b "CONSTRUCT YOUR NECROPOLIS".

example

In a four-player game, you choose the Anubis God tile, numbered 2. You are therefore the second player to choose your pair of Construction cards in phase 3.a.

Go immediately to Phase 3.b "CONSTRUCT YOUR NECROPOLIS" before the next player chooses a pair of Construction cards.

3.b CONSTRUCT YOUR NECROPOLIS

Just after choosing a pair of Construction cards and before the next player chooses this pair, place the cards that you have in hand to construct edifices according to the God tile you possess. **You can only play one Construction card per edifice on your turn.** However, playing Construction cards on the Obelisk or Tomb is optional. You may be left with cards at the end of your turn.

Example

You chose God tile  (Anubis). There is a Pyramid and a Tomb on this tile. You can therefore place a Construction card in your Pyramid and a Construction card in your Tomb.

PYRAMID

TOMB

A Construction card can never be removed, rearranged, or exchanged once you place it in your necropolis.

ANUBIS
PYRAMID
TOMB
CONSTRUCTION CARDS

CLARIFICATIONS OF GOD TILES

FOR 2 AND 3 PLAYERS

HORUS

You **must** add 1 Construction card to your Pyramid. You will have 1 card at the end of your turn.

ANUBIS

You **must** add 1 Construction card to your Pyramid and you **may** play 1 Construction card in your Tomb.

KHEPRI

You **must** add 1 Construction card to your Pyramid and you **may** play 1 Construction card in your Obelisk.

SEKHMET

You **must** add 1 Construction card to your Pyramid. You **may** also play 1 card in your Tomb **AND** 1 card in your Obelisk. **You may therefore play up to 3.**

FOR 4 AND 5 PLAYERS

SEKHMET

You **must** add 1 Construction card to your Pyramid. You **may** also play 1 card in your Tomb **OR** your Obelisk.

THOTH

You **must** add 1 Construction card to your Pyramid. You **may** also play 1 card in your Tomb **AND** 1 card in your Obelisk. **You may therefore play up to 3.**

CONSTRUCT YOUR PYRAMID

Every round, you must always add one Construction card to your Pyramid by placing it either:

- **Adjacent to a Construction card** already played if the current stage of the Pyramid isn't completed yet.

OR

- **Above two adjacent cards** to play in the next stage.

At the end of the game, your Pyramid will be composed of 4 stages for a total of **10 Construction cards** displayed as follows:

CONSTRUCT YOUR OBELISK

The first card of your Obelisk is played to the right of your Pyramid, leaving a space between the two edifices.

Each time you add a Construction card to your Obelisk, place it so it covers the **top half** of the last card you played. The Construction cards will align without covering the stones.

CONSTRUCT YOUR TOMB

Cards played in your Tomb are simply played below your Pyramid in a **face-down** pile. They won't be revealed until the end of the game, during scoring. You can, at any moment, look at the cards in your Tomb.

4 END OF THE ROUND

When all players have placed cards in their necropolis, the round ends. Do the following things:

Return all the **God tiles** to the center of the table.

 **With two players:** put back the randomly discarded God tile and remove the God **with the next number** (1 ► 2 ► 3 ► 4 ► 1...).

Example If Sekhmet (4) was removed, you now need to remove Horus (1) for the round. There should only be 3 God tiles available at the start of the round.

 Check that you have at most **1 Construction card in your hand**. If you have more than one, discard the extra cards face-up in the box so that you only have 1 Construction card.

 The player **to the left** of the first player takes the First Player token. Now the next round can begin.

End of the Game and Scoring

The game ends **after the 10th round**, when all players have finished building their Pyramids made of 10 Construction cards. Discard all cards left in hand and **reveal all the cards in your Tomb**.

Determine your score by adding up the victory points **for each of your edifices separately** (Pyramid, Obelisk, and Tomb) and the **Glyphs** in their correct edifices in your necropolis.

The player with the most points wins the game. If there's a tie, tied players share the victory.

SCORING VICTORY POINTS

PYRAMID

For each of the five stone colors, count the largest number of (orthogonally) connected stones of the same color in your Pyramid.

- ▲ Gain 1 victory point for each stone in your **longest connection of each color**.
- ▲ Gain 1 **extra** victory point per stone in the **longest connection in your Pyramid**.

example

	4 points
	2 points
	6 + 6 points
	3 point
	1 point

- ▲ **Pyramid Bonus:** Gain 10 extra points if each color earns at least 3 victory points.

SCORING VICTORY POINTS (cont.)

OBELISK

Note the color present in the most stages of your Obelisk (a stage means one Construction card). Gain victory points corresponding to the number of stages in which this color is present. **You only gain victory points for a single color**, even if multiple colors are tied.

Number of stages	1	2	3	4	5 OR MORE
Points	1	3	6	10	15

Red and blue each have the greatest presence, in 3 stages. You may only score victory points for a single color though, so this earns 6 victory points.

TOMB

Count the number of **stones** of each color present on the Construction cards in your Tomb. Compare with the other players and see which player has the majority of stones in each color.

Gain 5 victory points for each majority you have. In case players tie for a color, there is no majority, so no player gains the 5 victory points for this color.

GLYPHS

Gain 2 victory points for each Glyph in the correct edifice.

Each **Pyramid**
Glyph present in
your Pyramid earns
you 2 points.

Each **Obelisk**
Glyph present in
your Obelisk earns
you 2 points.

Each **Tomb**
Glyph present in
your Tomb earns
you 2 points.
