

DREAM RUNNERS

RULES

This dream seems strange, almost too real. And yet, the four-winged owl you see so clearly cannot possibly exist. What are you doing on this unfamiliar island? Other people have ended up here as well... and they look as disconcerted as you feel. You need to get out of here.

◆ GOAL OF THE GAME ◆

Assemble your **segments** quickly and cleverly to create a composition that best matches the **dream tile** in the middle of the table. Collect as many **star fragments** as possible, banish **nightmares**, and above all don't waste any time!

The player who has the most **dream points** 🌙 after 8 rounds wins.

COMPONENTS

1 sand timer

24 dream tiles:

- 6 level-1 tiles
- 6 level-2 tiles
- 6 level-3 tiles
- 6 level-4 tiles

8 scoring tokens

(2 per player)

1 main board

18 chest tokens

4 serenity boards

(1 per player)

60 coin tokens

64 star fragment tokens:

- 16 blue fragments
- 16 white fragments
- 16 orange fragments
- 16 green fragments

20 key tokens

40 segment tiles:

- 24 neutral segment tiles (6 of each shape)
- 4 initial segment tiles per player

★ SETUP ★

Form a dream pile in the middle of the table as follows: Choose 2 **dream 4 tiles** at random and put them face down. Then choose 2 **dream 3 tiles** at random and put them face down on top of the two **dream 4 tiles**. Do the same with 2 **dream 2 tiles**, which you put on top of the **dream 3 tiles**, and then with 2 **dream 1 tiles**, which you put on top of the **dream 2 tiles**. Put the rest of the **tiles** back in the box. Put the pile in the middle of the table so that all players can see it easily **1**. Put the main board nearby **2**.

Note: When you are first learning the game, before setting up, put aside all the **tiles** that have a star at the bottom **3**. When playing with experienced players, use both the **tiles** with and without stars.

Each player chooses a color, takes the corresponding **serenity board**, and puts it in front of them **4**. Each player then puts one of the 2 scoring tokens **5** in their color on the start of the **star track** on the main board **5** and the other on their **serenity track** **6**. Each player also takes the 4 **segments** in their color and 2 **coin** tokens, and puts them in front of them **7**.

Form 4 piles of 6 **segments** face down (one pile for each shape) and put them near the main board. Turn the **segment** on top of each pile face up **8**.

Sort the **chest** tokens by type and put them into 3 face-down piles, one for each type (**9**). Put the **key** tokens **10**, **star fragments** **11** and **coins** **12** in a reserve near the main board **10**.

Put the **dream tile** from the top of the pile face down in the middle of the table **11** and put the sand timer next to it **12**.

◆ GAME OVERVIEW ◆

You encounter a new **dream tile** each round. You must fit your **segments** together so they best match the contents of the **dream tile** to collect rewards (using the **collect** effect ) and **banish nightmares**  (using the **banish** effect ).

Collecting **star fragments** and **banishing nightmares** let you advance on the **star track** and keep your **serenity**  to earn the most **dream points**  at the end of the game. At the end of every round, you can spend **coins** to obtain new **segments** or earn **serenity points**.

◆ PLAYING THE GAME ◆

Each round is played in phases as follows:

- 1 - Creating a Dream
- 2 - Resolving Compositions
- 3 - Making Improvements
- 4 - Preparing for the Next Round

◆ 1) CREATING A DREAM ◆

For the first round, the player who dreams the most turns the **dream tile** in the middle of the table face up. This is the dream that all the players will experience during the round. During this phase, all players play simultaneously and in real time. All players must use their **segments** to form squares of 3 cells by 3 cells, or shapes close to that (see "Resolve Compositions", pg. 7) to match the dream as best they can.

As soon as a player is happy with how they have arranged their **segments**, that player takes the sand timer, puts it on the space provided for it on their **serenity** board, turns it over, and announces that they have done so. That player can no longer change their composition. That player immediately takes a **coin** and becomes the "first dreamer" for the round. The other players must complete their compositions. When the sand timer runs out, the phase is over and none of the players can change their compositions anymore.

Note: Players do not need to use all their **segments** during this phase.

II) RESOLVING COMPOSITIONS

Each player applies the following effects in the order of their choice:

◆ **Dream Coherence:** For each cell in your composition that is missing from a 3-cell by 3-cell square AND for each cell outside a 3-cell by 3-cell square, you lose 1 **serenity point**.

◆ **Banishing:** For each **nightmare** cell on which you did not apply the **banish** effect , you lose as many **serenity points** as indicated on the cell.

◆ **Collecting:** For each reward cell on which you applied the **collect** effect , you receive all of the rewards on that cell. Each reward cell can contain one or more of the following elements: **star fragments**, **keys**, **coins**, **serenity points**, and **chests**.

Serenity Track: When you do not **banish nightmares** or when your dream is incoherent, you lose **serenity points** and move your scoring token down that track . The more you move down that track, the fewer **dream points** you will earn at the end of the game. In addition, if you reach the last space at the bottom of the track, you wake up and immediately lose the game!

REWARDS

Star Fragments: Take the corresponding **fragment** token from the reserve (with the  **fragment**, you choose the color). As soon as you have 4 **fragments** of different colors, discard them and move your scoring token up one space on the **star track**.

Serenity: Gain 1 **serenity point**.

Key: Take one **key** from the reserve. Keys are used to open **chests** (see "Special Cells", pg. 8).

Coin: Take 1 **coin** from the reserve. You can spend coins to gain **serenity** or acquire new **segments** (see "Making Improvements", pg. 9).

SPECIAL EFFECTS

This effect works like the **collect** effect , but when you apply this effect on a reward cell, you gain double what you would normally gain!

Apply the **collect** effect  AND the **banish** effect  on this cell.

EXAMPLE

1 There is one missing cell and one extra cell, so the player loses 2 **serenity points**.

2 One of the **nightmares** was not **banished**, so the player loses 2 **serenity points**.

3 The player receives a **key** token and two blue **fragments** thanks to the **collect** effects  and .

SPECIAL CELLS

Octopus: If this **nightmare** is not **banished**, lose as many **serenity points** as there are **collect** symbols  in your composition.

Bat: If this **nightmare** is not **banished** and you have not played all your **segments** this round, put one of your unplayed **segments** back in the box.

Spider: If this **nightmare** is not **banished**, lose 1 **serenity point**. If you apply the **collect** effect  on this cell, you receive the corresponding **fragment**. If you apply the **banish/collect** effect  on this cell, you receive the **fragment** without losing **serenity points**!

Chest: If you apply the **collect** effect  and have enough **keys**, you open the **chest**. Turn over the top **chest** token in the corresponding pile, discard the necessary **keys** and receive the contents. (Only one **chest** is turned over per round, and every player who opens that chest during the round receives its contents.)

Converging Dreams: Players who applied the **collect** effect  on this cell share its contents. Prepare the contents of the cell, then each of those players in turn takes one of those elements (rotating clockwise from the first dreamer). Keep going around until all the elements have been taken.

Note: In the case of multiple resolutions, each player may resolve them in the order that is the most advantageous to them.

◆ SPECIAL CASES ◆

◆ The  effect does not change the amount of **serenity points** lost when it is played on a **nightmare** cell.

◆ The  effect counts as a single **collect** symbol  on the **octopus** cell.

◆ If you apply the  effect to a **chest** cell, you must open the **chest** a second time if possible by discarding the corresponding **keys** again to double the reward obtained.

◆ If you apply the  effect on a  **fragment** cell, choose a **fragment** color and receive 2 **fragments** in that color.

◆ If you apply the  effect on a **converging dreams** cell, take part in the sharing of the rewards normally. Then, after the rewards have been distributed, double your rewards by taking the same ones again from the reserve.

◆ III) MAKING IMPROVEMENTS ◆

During this phase, you may spend **coins** to acquire new **segments** and gain **serenity**.

Each player, starting with the first dreamer and continuing clockwise, can spend 4 **coins** to acquire one of the four visible **segments**  (maximum 1 **segment** per player per round). Afterwards, turn over the next **segment** in the pile.

Certain **segments** have **dream points** and **coins** depicted on them. When you buy a **segment** with a depiction of **coins** on it , you immediately get as many **coins** as indicated. At the end of the game, the **dream points**  depicted on the **segments** in your possession are added to your score.

Gaining 1 **serenity** point costs 3 **coins** . You may do this as often as you like.

◆ IV) PREPARING FOR THE NEXT ROUND ◆

Put the **dream tile** from the round in the box, then put the **dream tile** from the top of the pile face down in its place. If a **chest** token has been revealed, put it back in the box. The first dreamer puts the sand timer next to the **dream tile**. When all the players are ready, the first dreamer turns over the **dream tile** and a new round begins.

✦ END OF THE GAME ✦

After 8 rounds, the game ends. Each player adds up the **dream points**  matching their positions on the **star track**  and on their **serenity track** , plus the **dream points** shown on the **segments**  in their possession. The player with the most **dream points** wins. If players are tied, the victory goes to the player with the most **coins**.
