CHROMA CUBE

GAME INFORMATION

How Does Chroma Cube work?

Chroma Cube is a color-based deduction puzzle that challenges you to figure out the resting place of all 12 colors in a 3 by 4 grid. Each puzzle card shows you the starting position for some of the colored blocks and a handful of clues that you must use to determine where the other colors go. Once you think you have the correct arrangement of colors, you can check your guess on the back of the card.

Progressive Difficulty

You'll notice that each card is numbered from 1 to 25. We recommend starting with Puzzle 1 and working your way through the puzzles in order. They will become more difficult and cryptic as you progress from one puzzle to the next. More importantly, some puzzles rely on "rules" that are established in previous puzzles.

Establishing Clues

If you come across a clue that doesn't immediately make sense, it may be introducing a new rule to the puzzle. When this happens, there are usually clues about color positions that are already showing to help you understand what the clue means. These are establishing clues.

Got a different answer?

With 12 different positions on the tray, the blocks can be arranged in 479,001,600 different combinations! That means that you may occasionally discover an answer to a puzzle that fits all of the clues, but is different than the answer provided on the back. If this is the case, double check that all of the rules still apply to your arrangement, and if they do, give yourself a big pat on the back for discovering a new solution to the same puzzle!

Color Legend

Black	Teal	Orange	Mint
Emerald	Magenta	Mustard	Purple
Brown	White	Coral	Cobalt
